The Danish-produced special lawnmower Lynex LX 1000, with its simple construction and low center of gravity, works on slopes up to 75 degrees.
The machine is radio controlled and can move within a range of 800 meters.
The powerful tracks allow the mower high load capacity and stability both on the slopes and in wetlands.
The reliable transmission, combined with powerful cutting gives high performance even under difficult conditions, and the machine is ideal for mowing on steep slopes at water reservoirs and nature reserves.
The unique engine mounts ensure that the engine is always in a vertical position during operation. The deck has great flotation and also provides great cutting capacity. To increase safety, LYNEX LX 1000 features a powerful main frame of high strength steel on which there is a 5 year warranty.

The machine has the lowest center of gravity on the market combined with a highly efficient transmission that allows the machine to work everywhere. Please contact us about a demonstration on your own land.

**Application Areas:**
- Roadside Embankments and Verges
- Reservoir and Lagoon Banks
- Bird and Nature Reserves
- Water Works and Treatment Plants
- Railway Embankments
- Ministry of Defence Sites
- Munitions and Bulk Fuel Installations
